DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 5, 8, 10, 13, 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (2002/0179000).

The Lee et al reference teaches a method of creating a single crystal ferroelectric material, note entire reference. A powder is first created consisting of PMN-PT where the composition can be varied, note page 2. The composition is a ceramic compound. The material is made by adding powders of the composition with an additive. The resultant material is heated treated at 1,200c, note example 1. More then one additive can be used note example 3. The material is crystallized by heating in a crucible with

Application/Control Number: 10/551,355 Page 3

Art Unit: 1792

diameters above 5cm, and the resulting crystal has similar sizes, note page 4. The crystallization condition can be high temperature and high pressures, note example 13. The sole difference between the instant claims and the prior art is the exact composition. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable composition in the Lee et al reference in order to create the desired properties as the composition will change the properties of the final product.

Claims 6, 7, 9, 11, 12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al (2002/0179000).

The Lee et al reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the additive and conditions. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable conditions and additives in the Lee et al reference in order to increase the uniformity of the final product.

Response to Applicants' Arguments

Applicant's arguments filed May 5, 2008 have been fully considered but they are not persuasive.

Applicants' argument concerning the Lee et al reference is noted. However, the reference does teach that the melt growth method is well known and within the skill of the art. The reference does meet the claimed limitation of melting. It is noted, that claims 5 recites no melting step at all.

Applicants' argument concerning the use of the material in Lee et al has been considered and not deemed persuasive. The use is not claimed and therefore, is not an issue at hand. The reference teaches the means to create a single crystal ferroelectric.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M. Kunemund whose telephone number is 571-272-1464. The examiner can normally be reached on 8 hours.

Application/Control Number: 10/551,355 Page 5

Art Unit: 1792

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Kornakov can be reached on 571-272-1303. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
